

Lehrstuhl für Sicherheit in der Informatik
Prof. Dr. Claudia Eckert

Announcement: Student job (HiWi) in cooperation with Fraunhofer AISEC, Garching

Software development for trusted data services

Job Description

Fraunhofer AISEC is developing gateway technology and services for trusted data exchange. We promote self-sovereign data supply chains and security technologies for high-value data processing on secure gateways as well as trusted cloud environments. We currently have an opening for a research assistant position. Your main activity will be development tasks for our services and gateway technologies. The monthly working time is 40 hours, but can be increased on request. Tasks include:

- Development of services and gateway technologies
- Adaptation and integration of usage control features
- Tests and documentation
- Design and implementation of GUIs

Area of work

You will get in touch with the following topics:

- Kotlin
- Java
- Angular
- Open source development

Existing in-depth knowledge in any of the areas is not required. Generation of own ideas is desired and creative work is encouraged. If desired and applicable a follow-up thesis topic can be provided.
